Moore's Law – The number of transistors on integrated circuit chips (1971-2016)

Moore's law describes the empirical regularity that the number of transistors on integrated circuits doubles approximately every two years. This advancement is important as other aspects of technological progress – such as processing speed or the price of electronic products – are strongly linked to Moore's law.

BIG CONCEPT

La automatización de tareas con la correcta visión.
Puede significar un cambio de paradigma aunque
para unos, se trate de solo líneas de código.
